

INDEXING NETWORK-RESIDENT OBJECTS

ABSTRACT OF THE DISCLOSURE

According to the invention, a method for providing search results for network-resident objects to a user is disclosed. In one step, a plurality of search processes are monitored. Information relating to the plurality of search processes is stored. A search query from the user is received. The search query is correlated with the information relating to plurality of search processes. Search results related to the search query and the information are presented.
